Apply your degree in supply chain management and become an agent for change

A career in supply chain management can mean many different things. Because the supply chain can involve many different steps and individuals, professionals can hold many types of jobs and have a variety of responsibilities. These can range from inventory management to shipping to sales. Bottom line; this is a growing field and given recent global developments, it's likely that demand for qualified professionals will grow faster than anticipated.

As supply chains continue to evolve, professionals in the industry are faced with the challenges and complexities of creating sustainable supply chains in their organizations. The need to gain expertise in the field continues to grow.

The Thiel College Supply Chain Management program enables you with the tools and resources to meet the challenges and opportunities of today's supply chains head-on.

The only program in northwest Pennsylvania, our curriculum is adapted continually to address current trends in the industry.

"The line between disorder and order lies in logistics."

- Sun Tsu

In the aftermath of severe disruption from the COVID-19 pandemic, a survey from Ernst & Young found that US enterprises need to shake up supply chain strategies to become more resilient, collaborative, and networked.

While some sectors were hit hard by disruption, across the board, protecting, retraining, and reskilling the workforce is a major priority, along with investing to make the autonomous supply chain a reality. However, simply utilizing digital technologies does not equate to creating a digitized, autonomous supply chain — it needs connected supply chain technologies across planning, procurement, manufacturing, and logistics that work beyond the organization's four walls. It's the difference between "doing digital" and "being digital."

Enhance your Bachelor of Business Management with a concentration in Supply Chain at Thiel College.

Why It's Worth it:

- Experience a deep dive into supply chain through a robust and innovative curriculum
- Learn from experienced Thiel faculty with real-world experience
- Develop skills that are transferable between industries
- Average annual salary in Pittsburgh typically falls between **\$109,109 & \$139,822***
